Information Page

Report Purpose

The purpose of this Account Receivable (AR) Dashboard is to provide a centralized, real-time view of outstanding receivables to support financial oversight and cash flow monitoring.

This dashboard contains three main pages:

1. **AR Overview**
   - Monitor total outstanding invoice count and dollar amounts
   - Analyze aging distribution based on **(Today – Due Date):** Current, 1–30, 31–60, 61–90, 91-120, 121+ days
   - Compare AR performance across Business Units
   - Review outstanding invoices by year
2. **Closed Invoices**
   - Focuses exclusively on **closed invoices** to evaluate payment performance., including tracking payment timeliness (Key metric: **Days to Pay = Paid Date – Due Date**), and percentage of invoices paid late by Business Units
   - Negative or zero Days to Pay indicates on-time or early payment, positive Days to Pay indicates late payment
   - Only invoices marked as **Paid in Full** are included, partial payments are excluded from Days to Pay analysis
3. **Outstanding Invoices Detail**

Data Source Notes

Data Refresh

- Dashboard refreshes daily at end of day (around 7:00 PM)

Data Quality

Data on each report page includes a stoplight icon in the top right-hand corner to indicate overall data quality. This rating is designated by the responsible analyst with the following categories in mind.

RED: This report should not be used as a standalone source of information to make data-informed decisions. The data may have quality issues such as: inability to verify, lacking primary keys, inconsistent or missing definitions, etc.

YELLOW: data in this report should be used with caution. Caveats may be unclear or complicated, but the responsible analyst has determined that the data has some value in data-informed decision making.

GREEN: The data in this report has undergone testing and verification for data integrity and quality. Caveats are unnecessary (or sufficiently rare) or are well documented and clear. This data is easy to replicate and data processing steps are transparent and documented. No data source is perfect.
